

YARIN BAR

Mobile Phone +972 52 697 02 04 | **Email** yarinbar1@gmail.com | **Residence** Haifa

General

Fast learner, highly driven and extremely dedicated. Looking to start my PhD in robust semi-supervised learning for language models, under Yaniv Romano's supervision.

Education

- **2021 – 2024, M.Sc. in Computer Science, Technion Israel Institute of Technology**
Thesis Grade – 96.0
- **2017 – 2021, B.Sc. in Computer Science, Technion Israel Institute of Technology**
Recipient of PEF excellence scholarship
GPA – 88.0

Publications

- **“Testing For Distribution Shifts with Conditional Conformal Test Martingales”**
S. Shaer, Y. Bar, Y. Romano – [arXiv:2602.13848](https://arxiv.org/abs/2602.13848)
- **“Protected Test-Time Adaptation via Online Entropy Matching”** – NeurIPS 2024
Y. Bar, S. Shaer, Y. Romano – [arXiv:2408.07511](https://arxiv.org/abs/2408.07511)
- **“Towards Weakly-Supervised Text Spotting using a Multi-Task Transformer”** – CVPR 2022
Y. Kittenplon, I. Lavi, S. Fogel, Y. Bar, R. Manmatha, P. Perona – [arXiv:2202.05508](https://arxiv.org/abs/2202.05508)

Experience

- **2024 – Built kollit.ai – a Prediction Based Trading Strategy Calculator for Investments**
Using statistics, machine learning and game theory. Designed, developed and launched.
- **2023 – 2025– Head of Algorithm Development, cathAlert**
Computer vision, large models and algorithm development for medical imagery.
- **2021 – 2022, Developed a News Website for Comparing News Coverages**
Using NLP & Graph Theory, I planned, developed, and launched a news website that lets users compare news coverages from around the world. Extended demo available by request.
- **2021 – 2022, Applied Scientist Student, Amazon AWS – AI Research**
Developing computer vision and data science algorithms using neural networks.
- **2020, Neural Network project in Technion, Israel** ([GitHub link](#))
Participated in a research project on time-frequency joint attention neural network architectures.
- **2019 – 2020, Internship in National Tsing Hua University, Taiwan**
Developed an algorithm that overcomes adversarial attacks with neural networks in NTHU.
- **2019, Designed & Built an algorithmic trading framework for crypto currencies** ([GitHub link](#))

Programming

- Python - PyTorch, NumPy, Pandas, CV2, NetworkX

Military Service

- **2013 – 2016, IAF Electronic Warfare System Operations**
Developed a comprehensive tool to help track, schedule, and review drills. Rank – Staff Sergeant.

Social

- **2019 – 2020 – Student Exchange in National Chiao Tung University, Taiwan**

- **2011 – 2012 – Volunteering in "Magen David Adom"** (Israeli Red Cross)
